Dell Optiplex Header Adapter Kit (For 390, 3010, & 3020 Mid Tower)

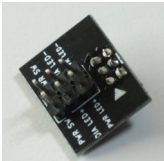

Revision 1.0

- Package Contents -

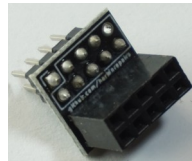

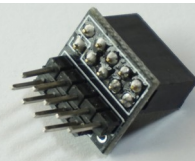

1 – Power/Diagnostic LED/Button Header

1 – Diagnostic LED/HDD Header

1 – USB 2.0 Header

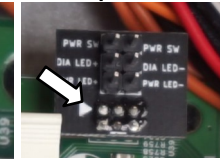

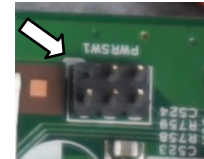

- Usage -

This kit is designed for the mid tower (not SFF or small form factor) desktops. It allows you to connect standard PC case I/O headers to the Dell Optiplex 390, 3010, and 3020 motherboards. These are often used to build budget gaming PC's using decommissioned office desktops and convert them to work with modern PC cases. The images to the right show where these adapters need to be connected and the orientation. **Warning, connecting these adapters in the wrong orientation could result in damage to your motherboard. Do not use these adapters with models other than the ones mentioned above.** More information and installation video can be found linked in our Github repository here: github.com/HarbinRepairs/Dell-Optiplex-MB-Header-Adapters

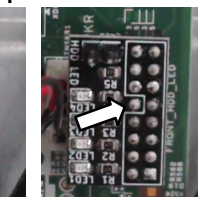

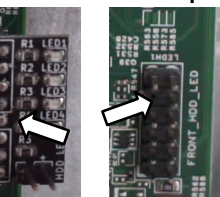

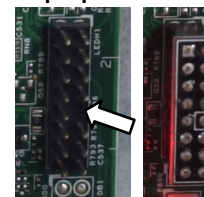

Harbin Repairs is not affiliated with Dell in any way shape or form.
